Hi Olivia,

I wanted to provide you with an update regarding today's production release for Case Management.

Deployment Schedule

We are aiming to complete the production deployment by the end of today, 19th January 2026, as per our original timeline. However, please be aware that data may appear incorrect during the deployment process whilst we complete the updates. Additionally, there may still be bugs that require fixing, which we can remedy in the next release (26th January 2026).

We propose to commence the downtime at approximately 16:00 today. We will endeavour to minimise the disruption and will notify you once the system is back online and fully operational.

Post-Deployment

Following the deployment, the Case Management functionality will be live with real data (replacing the mock data currently visible).

Please note that the finalised access controls will be included in the next release (26th January 2026).

Regarding outstanding tasks, I will create an up to date open items log with any remaining work and pass this on to you before the end of the day.

Please let me know if you have any concerns or questions.

Many thanks,

Steven

Subject: Re: Trigger Data - Updated Case Management Project Deck - 7th January Meeting Follow-up

Hi Olivia,

Please find the following progress report regarding the Case Management functionality:

Access Details

- **Production Link:** <https://frp.porterbrook.co.uk/>
- **Credentials:** Please use your existing login details.

Technical Notes

- **Navigation Issue:** If the "Case Management" item does not appear in your menu, clearing your browser cookies and refreshing the page should resolve the issue.
- **Access Controls:** We are currently segregating access for FRP, Case Management, and the upcoming Engine Idling pages. While all current users can view Case Management for now, finalised access controls will be implemented for the release on Monday, January 19th.

Development Status

- **Alerts Page:** We are still refining the alerts tab in the detailed view; you may notice some inconsistent behaviour in this section.
- **Data:** The page currently displays mock data. We are in the process of swapping this for live data ahead of the January 19th release.

Please let me know if you or the team have any questions.

Many thanks,

Steven

Hi Steven,

Thanks for this, we will use it for our testing process.

Please could you add a tab with the link to the IntelliRail dev portal and any other details we need relating to this. When can we expect to receive the link?

Regards

Olivia Wallace

Morning Olivia,

I have attached the user acceptance testing log for your review.

Best regards,

Steven

Good morning Joe,

Thank you for the related signals list; this is very helpful.

Regarding the threshold configuration, my initial thoughts are that building a system for you to adjust these values autonomously is not a trivial task and would require significant additional development time.

I will discuss this with Reinoud and Tristan to assess the effort involved. We will aim to propose a solution early next week on how best to support your iterative refinement process.

I look forward to hearing the outcomes of your workshop.

Many thanks,

Steven

Good morning Steven,

Please see attached 'related signals' list. This shows each event we have in PI as well as what

signals should be displayed on that events trace.

The thresholding values (for example, how many low boost events before a case is proposed etc.) will still need to be worked out. How easy is it to set these thresholds? Is there a simple way to enter different values for each event, so it can be tweaked easily? I imagine it will take a fair bit of iteration to perfect these and it would be good if I could do that autonomously (or close to).

I will try hold a workshop next week with a couple of engineers who are experienced in using RCM and we will put our thoughts together on initial values.

Cheers

Joe

Some people who received this message don't often get email from steven.das@trigger.software. [Learn why this is important](#)

Hi Olivia,

Thank you for providing the train schematic links – these will be very helpful for the project.

As mentioned in my previous email, please find attached the formal change request (T0085_PCR_01) for the navigation menu relocation and IAM updates.

The change request outlines the scope, rationale, and impact of restructuring the navigation hierarchy to accommodate the IntelliRail rebrand and improved user experience.

Please review the document at your convenience. If you require any clarification or have questions regarding the change request, please let me know.

Best regards,

Steven

Hi Steven,

Please see links to images below, Joe will provide the rest of the information tomorrow.

https://en.wikipedia.org/wiki/East_Midlands_Railway

https://en.wikipedia.org/wiki/Northern_Trains

I am off tomorrow so will sign off the CR on Monday.

Regards

Olivia Wallace

Subject: Trigger Data - Updated Case Management Project Deck - 7th January Meeting Follow-up

Hi Olivia,

Thank you for taking the time to meet with us yesterday to review the Case Management project progress. We appreciate your valuable feedback and the constructive discussion around the additional requirements.

Following our meeting, we have updated the project deck to reflect the changes and requirements discussed. Please find the updated project deck attached for your review.

Next Steps:

- Release 1 Dev Testing: 12th January 2026
- Release 2 Production Release: 19th January 2026
- Critical dependencies: Vehicle images by 9th January to avoid impacting production timeline, vehicle-to-car mapping logic, and signal list for alert types

We will be sending through the formal change request (T0085_PCR_01) for the navigation menu relocation and IAM updates by the end of today for your review and approval.

If you have any questions or require further clarification on any of the updates, please don't hesitate to reach out.

Best regards,

Steven
